

Technical Data: GROWSTONE GS-1 Hydro Stones

GS-1 are multipurpose stones with a unique 50-30% air-to-water ratio allowing for extreme frequent feedings with no risk of overwatering or root rot. A great fit for automated hydroponic irrigation systems. GS-1 Hydro Stones open and interconnected pores guarantees fast drainage and high capillary action which are key for top drip and DWC systems, respectively. Irregular shaped stones encourages root branching and hairy roots to develop. Stones are considerably cleaner and lighter weight than other growing media. GS-1 can be used alone or blended into any soil to increase aeration & drainage and eliminate compaction as Growstones are rigid and do not break down over time.

Growstone manufactures products for the horticultural industries like hydroponics, aquaponics, green roofs, vertical walls, water filtration and other markets making use of recycled glass that would otherwise be buried in landfills.

PRODUCTION FACILITY: Albuquerque, New Mexico USA
